Discovered by: Aung Khant

Date: July 12, 2008

Product: PhpMyAdmin 2.11.7 (<http://phpmyadmin.net>)

Vulnerability Type: **XSRF/CSRF (Cross-site Request Forgery)**

Risk: **low~medium**

Threats: Data Corruption

Note:

After listing CSRF requests that can be done in non-privilege mood, I found one possible threat. The Ability to "Modify User Charset" request may corrupt inserted data because data might not be the way the user intends.

Proof-Of-Concept:

```
